

## Proposed Policies

- **DRAFT Policy 008 Subscriber Equipment Acceptance -**

- This policy lays out the procedure for adding new equipment manufacturers to the authorized list of vendors. No major change on the way we do things, this simply puts our normal practice in writing so vendors know what to expect.

- **DRAFT Policy 009 Priority Level -**

- This policy sets priority levels for LWIN in the event two radios are in the busy cue for the next available channel. The policy gives priority to the "Emergency" button, then first responders. Much like Policy 008, this just puts our normal operations in writing.

## Policy Amendments

### AMENDMENT to Policy 002 System Access

- Cleans up language and formatting such as replacing “P25 System” with “LWIN”.
- Would allow the SIEC to admit non-standard users such as Public Utilities to gain access to LWIN on a case by case basis
- Utilized on other state systems where commercial companies essential to health, welfare and safety are charged for access.
- Does not obligate the SIEC to do so, it only allows the SIEC to consider the option.
